TOP-RATED AUDIENCE QUESTIONS:

1

Taking Your Own Moonshot - Gregory Robinson

What makes your style of leadership different and what are the secrets that make it more successful?

Answer: I'm a macro-leader, and I have a great team. Having really great people makes for a team that's organized and knows what they're doing. Let them go do it and be a facilitator. For me, the biggest keys are transparency, sometimes having fresh eyes, and having trust.

2

AI and the Future of Healthcare: The Possibilities of True Digital Transformation - Michael A. Pfeffer, MD

As a surgical oncologist, I am concerned that patients see reports before I can discuss their cancer diagnosis with them. How do we control this pervasive practice?

Answer: There's no 'one size fits all'. Different patients are going to have different experiences with the portal. I think the solution is providing better information through the portal using these new technologies that translate the results to be better understood by patients.

3

Fireside Chat - Jennifer Doudna, PhD & Melissa Welch, MD

What bioethic considerations need to be given to ensure genetic editing is done responsibly?

Answer: The ethics of genome editing present challenges, notably in ensuring equitable access to treatments and responsibly managing environmental implications. While concerns about heritable changes are significant, immediate focus should be on addressing access to life-saving treatments and ensuring responsible environmental practices in genetic manipulation.
